

### Features

- Up to 30 W CW output power
- 915nm 105 μm emitter size
- High Quality, Reliability, & Performance

### Applications

- Solid State Pumping
- Fiber Lasers
- Material Processing
- Medical
- Defense

## Product Specifications

### SMP-915-3-1022-25/30

#### Description:

High brightness, high quality, and high reliability are the foundation of our multi mode product line. Axcel's 915nm multi mode laser modules are available with up to 30W of continuous output power from fiber couple hermetically sealed package. Axcel's trademark laser chip design creates un-measurable degradation and long lifetimes that make our chips among the most reliable in the industry today. Our 915nm multi mode line serves a broad range of applications including solid state pumping, material processing, graphics, medical, and defense.

Please view our website for mechanical drawings of all of our module packages.

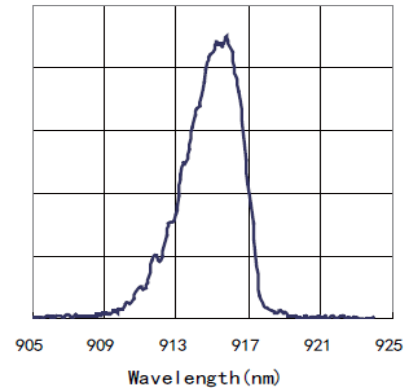

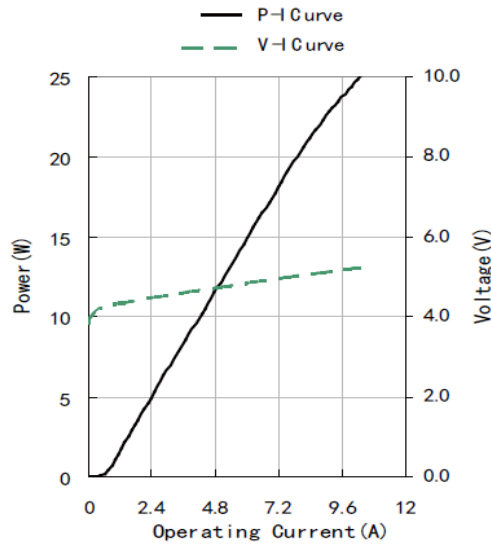

#### Performance Data for Multi-Mode 915nm High Power Module

Parameter	Symbol/Version Number	Min	Typ	Max	Units
Output Power I	Pop	25		30	W
Threshold Current	Ith		.65		A
Operating Current I	Iop	10.5		12	A
Operating Voltage	Vop	5.0		5.1	V
Power Conversion Efficiency	ηep		48		%
Slope Efficiency	$\eta_o = P_o / (I_{op} - I_{th})$		2.7		(W/A)
Peak Wavelength	λp	912	915	918	nm
Wavelength Tolerance	Nm/°C		0.35°C		°C
Spectral Width (FWHM)	Δλ		<6.0		nm
Lifetime	hours		<i>Minimum requirement</i>		hours
Storage Temp.	TStorage	-20		80	°C
Operating Temp.	Top	10	25	40	°C
Lead Soldering (with parts mounted to Heat sink)	TLS		250		°C 10 Seconds
Fiber Core Diameter			105		μm
Fiber Length			2.0		M
Numerical Aperture		0.15		0.22	NA
Feedback Protection (1030-1100nm)	FP		>40		dB

Note: 1) Specifications are subject to change without notice.

2) All Axcel Photonics products are TE polarized

**LIV Curve for 915nm, 25 W**

## Package Dimensions(mm)

### Safety

Caution: Laser light emitted from any diode laser is invisible and may be harmful to the human eye. Avoid looking directly into the diode laser aperture when the device is in operation.

**Note:** The use of optical instruments with this product will increase eye hazard.

### Operating Considerations

Operating the diode laser outside of its maximum ratings may cause device failure or a safety hazard. Power supplies used with the component must be employed such that the maximum peak optical power cannot be exceeded. CW diode lasers may be damaged by excessive drive current or switching transients. When using power supplies, the diode laser should be connected with the main power on and the output voltage at zero. The current should be increased slowly while monitoring the diode laser output power and the drive current. Device degradation accelerates with increased temperature, and therefore careful attention to minimize the case temperature

### ESD Caution

Always handle diode lasers with extreme care to prevent electrostatic discharge, the primary cause of unexpected diode failure. You can prevent ESD by always wearing wrist straps, grounding all applicable work surfaces, and following extremely rigorous anti-static techniques when handling diode lasers.

### Power Output Danger Label

**WARNING! Invisible laser radiation is emitted from devices as shown below**

### 21 CFR 1040.10 Compliance

Because of the small size of these devices, each of the labels shown are attached to the individual shipping container. They are illustrated here to comply with 21 CFR 1040.10 as applicable under the Radiation Control for Health and Safety Act of 1968.
